

From Potential to Excellence

Staying Ahead of the Mobile Technology Revolution

Mobile Platform Experience

TechDiscovery has experience working with all the following mobile platforms and their associated devices:

- Android
- RIM
- Palm/OS
- iPhone
- Symbian
- Windows Mobile

Industry Experience

- Telecommunication
- Entertainment
- Financial Services
- Government
- Insurance
- Healthcare

Today, mobile technologies are not merely an option; they are an essential tool of the modern marketplace. Considered by many to be one of the most important communication tools for people around the world, and a primary consumer interface platform for a growing array of business transactions, mobile technologies' advantages include remarkable accessibility, usability, convenience and popularity.

For over 10 years, TechDiscovery has successfully developed and delivered custom, commercial-grade software solutions for customer-facing applications. Today, we have turned that expertise on the mobile technology marketplace to help businesses take maximum advantage of today's revolution in communication and interaction.

From building applications for the fully- integrated handheld devices of large user communities to designing applications for multimedia asset management and field service provisioning, TechDiscovery has extensive experience developing cutting-edge software solutions that deliver on the great promise of mobile technology communications and capabilities. Leveraging a highly skilled international team of TechDiscovery technology developers and business experts, our methodology ensures rapid, innovative and cost-effective application development delivered to the highest standards of quality assurance excellence.

TechDiscovery Advantages

- Over 10 years developing custom software solutions
- Best-of-breed processes and methodologies
- Customer usability experience and expertise
- Comprehensive understanding of the global mobile technology industry

Development & Consulting

TechDiscovery provides both mobile application development solutions as well as consulting expertise for businesses eager to develop the enterprise standards and processes necessary to support internal mobile handheld application development teams.

A Unique Specialty, A Proven Approach

Developing applications for handheld technologies is a much newer and very different discipline than enterprise application development. TechDiscovery understands that the design and development of the user experience is fundamental to the success of any mobile technology application. We are well-versed in the memory limitations and back-end interaction challenges that require careful consideration and planning during the software development life cycle.

Employing our proprietary methodology, TechDiscovery is able to systematically transform the challenges of mobile technology application development into opportunities for greater business innovation. No matter the internal process used for development, be it Agile, Waterfall, RUP or any iterative approach, TechDiscovery seamlessly integrates its proprietary and proven TDFlex Methodology to ensure successful mobile solution development, execution and performance.

Constantly Learning and Investigating

The pace of mobile technology progress is remarkable—even for the technology industry. TechDiscovery makes it a point to continuously monitor, research and investigate the mobile industry. Why? To ensure our clients stay ahead of the solutions and innovation curve.
