

## SharePoint Services

**TechDiscovery's** SharePoint team can help you succeed by building solutions that connect employees, customers, and partners. Combining extensive implementation experience, knowledge of SharePoint, and a rightshoring approach, TechDiscovery can help you achieve SharePoint Server 2007 excellence cost-effectively.

SharePoint Consulting	From business and technical design to implementation, our Sharepoint consultants can assist you with all phases of a SharePoint project. We are able to provide a complete project team, or participate on an as-needed basis if you need specific SharePoint expertise.
SharePoint Branding	<p>Does your SharePoint portal need an extreme makeover? Our SharePoint team offers complete visual customization and branding ("skinning") services by talented visual designers who are experts in the not-so-intuitive science of applying outstanding visual designs to SharePoint. We can help your SharePoint customization project with custom:</p> <ul style="list-style-type: none"> <li>• style sheets</li> <li>• templates</li> <li>• themes</li> <li>• site definitions</li> <li>• portal area definitions</li> </ul>
SharePoint Architecture	Expanding your SharePoint installation to a server farm can be a daunting task. Making sure your portal is available and responsive to local and remote users should be a primary concern to any organization. Take advantage of our Sharepoint architects' experience and avoid many pitfalls.
SharePoint Migration	<p>TechDiscovery has extensive experience with migrations from earlier SharePoint implementations and transitions from non-Microsoft centric portals.</p> <p>Whether you are migrating between SharePoint servers, upgrading from SharePoint 2003 to 2007, or simply re-organizing your SharePoint content, we can help you migrate successfully and dramatically reduce your migration costs.</p>

We're  
TechDiscovery...  
Capturing ideas.  
Delivering solutions

Take advantage of  
TechDiscovery's  
SharePoint  
experience and  
avoid many pitfalls...

**Reduce your  
SharePoint  
migration costs.**

**Automate your  
business processes  
through workflows.**

**Customize your  
SharePoint portal to  
meet your specific  
needs.**

<p>SharePoint Taxonomy</p>	<p>For many organizations, one of the most difficult tasks on a SharePoint project is to design a taxonomy strategy that addresses portal/site organization and navigation as well as an overall information architecture that specifies how content will be categorized, classified and tagged.</p> <p>One of the primary reasons this is difficult for many organizations is that there is no standard approach. Instead, the best way to develop a taxonomy strategy and design is to pair knowledge of an organizations content with knowledge of SharePoint's capabilities. Our Sharepoint consultants can help you through this process by providing expertise we have gained from working on numerous engagements as well as our knowledge of the taxonomy-enabling features of SharePoint.</p>
<p>SharePoint Workflows &amp; InfoPath Forms</p>	<p>SharePoint has always done a great job of managing and maintaining document libraries, but sometimes just having a document library isn't enough. Often times, companies can greatly benefit from building some intelligence into their document libraries. In SharePoint 2007, this intelligence can be achieved through workflows.</p> <p>TechDiscovery's SharePoint consultants can help you automate your business processes through workflows and InfoPath forms that can be filled out using a browser or handheld device.</p>
<p>Regulatory Compliance</p>	<p>The stakes for regulatory non-compliance today are high and penalties are severe. Managing these issues can be challenging. TechDiscovery's Sharepoint team can configure SharePoint to give your business the capability to easily meet some of the most prominent standards including Sarbannes-Oxley.</p>
<p>Custom SharePoint Development</p>	<p>Most large organizations find that SharePoint must be customized to meet their specific business needs, such as integration with existing applications and business process enhancements.</p> <p>TechDiscovery's SharePoint and .NET developers can provide you with custom web parts and SharePoint solutions to meet the specific requirements of your organization.</p>
